

General Info

Check Point VPN or Endpoint Security VPN is our standard VPN Software. It is sometimes necessary to connect to the company's VPN network in order to use certain applications and websites.

Details/Steps

1. **Make sure that you are connected to the internet using either LAN Cable or WIFI.** Any network that has internet connectivity will work. You can validate that you have an internet connection by opening Microsoft Edge and browsing to Apple.com website.
2. To start a VPN connection, find the **Check Point VPN** application in the macOS Menu Bar, near the time and date.

- If the icon is missing from the macOS Menu Bar, locate, then launch the **Endpoint Security VPN** from the launchpad or from the Applications folder in Finder.

3. From the **Check Point Mobile** window, click **Connect**.

4. A web browser window will open, click **Allow** when prompted to allow pop-ups.
5. Sign in with your **user ID and password**. You may be asked to validate with your **Multi-factor Authentication (MFA)**.
6. When you see **Welcome: Authenticated by your identity provider**, close the browser window and VPN will be connected.

If you need further assistance, please call the Service Desk (1-877-286-3200) and a member of your local IT staff will assist.
